DRaaS

You can relax knowing that your crucial applications and data are duplicated to a safe, cloud-based disaster recovery site with our Disaster Recovery as a Service solution.

Geographic Redundancy

By utilizing multiple data centers in different geographic locations, we ensure that your data and applications are available, even in the event of a disaster.

Data Protection

Our DRaaS solution includes robust data protection mechanisms, such as encryption and secure transmission of data between primary and secondary sites.

Continuous Replication

By replicating changes in your environment in real timeyou won't be negatively impacted by other solutions that use local backups.

Reduced Downtime

We provide the replication and automated recovery software, the cloud computing resources and the network services that you will need to reduce downtime.

Quick Data Recovery

Automated recovery that simplifies your DR plan during a downtime event means that your critical applications restore online within minutes.

Simple, Affordable, Scalable

There's no longer a good excuse to go without a DRaaS Solution. Our budget-friendly plans are designed for organizations of all sizes.
